

# Introducing the New Grader-Rake

With the New Grader-Rake, instead of back breaking bending, your back and arms are straight as you pull, using your legs

## The Perfect Companion for Your Tiller and Trencher Fleet

When preparing soil for a new lawn, the work really begins when the tilling is done. For years, the only tool available for leveling and preparing soil for seed or sod was the standard aluminum landscape rake. An aluminum rake is not heavy enough to really move dirt or rake out clods and debris without exerting a lot of pressure with your back and arms.

With the Barreto Grader-Rake, the job is easy. Instead of back breaking bending, your back and arms are straight as you pull, using your legs. The rake is sturdy, and heavy enough to move dirt without having to use your arms. Eurathane tires make the rake easy to maneuver.

The Barreto Grader-Rake folds up for easy transportation

## Perfect for a Variety of Uses

The Grader-Rake is perfect for finish grading after rough grading is done with a tractor bucket or a skid steer. Perfect for smaller areas where larger machines won't fit. Perfect for backfilling after trenching. Perfect for spreading gravel when preparing sidewalks for pouring of concrete or spreading gravel and sand when preparing for pavers.

## Almost Immediate ROI

The Grader-Rake will pay for itself in twenty rentals, and is durable enough to last for 20 years or longer.

**Give your customers a new, easy way to grade, level and rake.**
